

In the Specification:

Please replace paragraph [0029] (which is [0043] in U.S. Pat. Pub. No. 2007/0243117) with the following amended version:

[0029] FIG. 10 is a schematic view of the entire area of the sample film 64 of biologic fluid 54, ~~34~~, which generally has an irregular border. In this example, the biologic fluid is blood. Because the white blood cells within the sample film 64 tend to become readily entrapped in the chamber 18, they are generally found in highest concentration within a few millimeters of the port 28.
